

Cloud computing refers to the use of computing resources that reside on a remote server and are delivered to the end user primarily on the Internet. Once considered a fad by critics, the web-based cloud is now the “solution of choice” for Medicfusion.

If you have additional questions about the benefits of Cloud Computing, please contact a Medicfusion sales representative at 866-643-7778.

Benefit with Medicfusion

A TRUE CLOUD BASED SOLUTION

For Chiropractors by Chiropractors

CLOUD ADVANTAGES

In today's technology-powered environment, our cloud solution is by far the safest way to protect your valuable patient records. In addition to data security, there are many other reasons why the “cloud” has become virtually the standard in business. These include:

- **Accessibility:** Medicfusion's seamlessly integrated, database-driven, web-based system is accessible 24/7 over the Internet. You have instant access to your data whenever and wherever you need it, including from your smart phone or tablet.
- **Web-based:** Client server-based software no longer makes sense. Why risk having your records destroyed by disasters like floods, hurricanes, fires or tornados. Regardless of what happens with brick and mortar structures, the cloud ensures that your data will be safe and can be accessed in the time it takes to plug in a new computer and login to Medicfusion.
- **Backup and Recovery:** Our cloud solution simplifies and speeds backup and recovery of data because it resides on the cloud and not on a physical device.
- **Cost Benefits:** These include not having to invest in stand-alone software or servers as well as saving on overhead charges like the cost of software updates and data storage.
- **Time and Energy Savings:** Software updates are done automatically, eliminating time spent on installs or upgrades. Because the cloud is typically more efficient than an IT infrastructure, it uses fewer resources to compute, which saves energy.

ANSWERING THE CRITICS

Critics of cloud solutions typically cite security and privacy issues, noting that end users are turning over their private data and information to the cloud service. Can the provider be trusted, will data be lost?

As cloud computing becomes more popular, there are more storage providers than ever. Competition is fierce. To survive, companies must be 100 percent dedicated to providing secure and reliable service or lose business. Medicfusion is also acutely aware of our role in protecting customer data. For example, we offer complete back up services and work tirelessly with our cloud resource to ensure the highest level of security and privacy in the marketplace.

A CAUTIONARY TALE: CLIENT SERVER VULNERABILITY

A few years ago, a chiropractor was accused of malpractice. Before the trial began, his town and office were ravaged by a tornado, and all his patient records were destroyed. He had no paper trail to defend his course of treatment. After a nightmarish trial, he was finally acquitted. If his office had been web-based, the records would have been easily accessible, and he would have been quickly cleared.
